

Improving and sustaining operation

Manufacturing excellence

Industrialization has rapidly changed the face of business. Confronted with tough competitive conditions, companies are scrambling to differentiate themselves from rivals. Sacrificing quality to cut costs, while common ten years ago, is no longer an option. By strategically focusing on manufacturing process innovation, we have helped companies to deliver high first pass yields, lower scrap and increase quality and reliability, initiatives which ultimately lower overall manufacturing costs. Indirectly, our processes harness an often under-tapped resource – people, to derive exponential gains with minimal financial investment.

Sustaining new initiatives

Being caught up in the day-to-day operational grind often means that management is distracted from their primary role of adding value to the company. Instead of implementing new cost saving systems to reinforce this value, these managers are embroiled with routine line duties. While it is inspiring to work side-by-side with superiors, this also means that there is no one left to conceptualize new long term solutions to daily problems.

Quality, cost and delivery objectives are consequently missed and targets have to be moved to remain realistic. Pressure builds within the current system but even as it becomes inherently clear that change is required, there is no one to bring about this change.

Customizing programs to fit you

We have extensive experience in managing and implementing the Manufacturing Excellence Program for Philips factories and external clients in Asia Pacific. We exploit this knowledge to drive your company towards achieving excellence in daily operations where continuous improvement and sustaining standards are the norm.

No matter which phase of operations your company is in, we will customize a full support program based on the maturity of your workforce and in accordance with your specific business needs. From training workshops to implementing self-initiated teams, these programs can be a catalyst for your change management plans.

Our consultants bring in a wealth of experience in initiating change even as day-to-day operations continue. We instigate change at all strata of the organization to capitalize on the full benefits of pushing a new solution into the organization. In doing so, we ensure that the new system is sustainable even as your business changes in response to the environment.
